SUMMARY

Bachelor of Engineering graduate in Information Science and Engineering with hands-on experience in Python, Django, React.js, JavaScript, SQL, MongoDB and Firebase. Proficient in developing secure web applications, REST APIs, authentication and database integration. Strong foundation in Object-Oriented Programming and problem-solving with an interest in building scalable software solutions.

TECHNICAL SKILLS

Programming Languages : Python, JavaScript, Java

Web Technologies & Frameworks : HTML, CSS, React.js, Django

Databases : SQL, MongoDB, Firebase

Tools & Platforms : Git, GitHub, VS Code, Vercel, Render

Core Concepts : Object-Oriented Programming (OOP), REST APIs, Authentication & Authorization, JWT

PROJECTS

Cybersecurity Framework for Rural Digital Banking (Final Year Project)

- Developed a secure digital banking platform designed for rural users, enabling safe financial transactions, offline banking support and real-time fraud prevention.
- Implemented secure authentication and transaction processing using JWT, OTP verification, RESTful APIs and MongoDB to protect user accounts and financial data.
- Integrated machine learning-based fraud detection, blockchain-backed transaction auditing, and an administrative dashboard to monitor transactions, detect suspicious activities and improve system security.

MedStock – Medical College Inventory Management System

- Developed a full-stack medical inventory management system using React, Django REST Framework, Firebase Authentication and Firestore.
- Implemented secure authentication, inventory tracking, supplier management, transaction management and department-wise allocation through RESTful APIs.
- Designed interactive dashboards with inventory analytics, barcode/QR scanning, audit logs, notifications and export functionality for efficient inventory management.

Heart Disease Prediction Using Machine Learning

- Developed a web-based heart disease prediction system using Python, Flask, and machine learning to assess the risk of heart disease based on patient health parameters.
- Implemented and evaluated multiple machine learning models, including Random Forest, SVM, MLP and Neural Network, to improve prediction accuracy and support data-driven diagnosis.
- Built an interactive interface with patient data management, prediction results and an admin dashboard.

PROFESSIONAL TRAINING.

Python Full Stack Development Training QSpiders

- Completed comprehensive training in Python, HTML, CSS, JavaScript, SQL and Django with a focus on full stack web development.
- Gained hands-on experience in Django, authentication, CRUD operations, database integration and form handling through practical assignments.

EDUCATION

Dayananda Sagar College of Engineering, Bengaluru – Bachelor of Engineering in Information - **2023–2026**
Science and Engineering

Government Polytechnic, Channasandra, Bengaluru – Diploma in Computer Science and Engineering - **2020–2023**

CERTIFICATIONS

Artificial Intelligence | Coursera
